PRESS RELEASE

ATV Corporation launches the EXS-3CY

Hamamatsu, Japan, April 28, 2021 — ATV Corporation announces the launch of the EXS-3CY, a new model in its EXS series line-up.

The EXS-3CY is a compact kit with big features; a quality sounding instrument for practice, home recording, and gigs at smaller venues.

Since its launch in 2019, the EXS series has proven popular with drummers wanting a kit that delivers realistic drum sounds and feels great to play on. Added to that, the xD3 sound module is packed with cool songs and useful practice features. Also, in 2020, ATV launched the EXS Kit Creation Tool on its Sound Store website. This powerful tool enables users to custom-build EXS kits from a selection of 69 high-quality instruments.

Now comes the long-awaited EXS-3CY, a three-cymbal variant of the EXS-3 with a 14" ride cymbal and two 12" crash cymbals.

All EXS-3CY cymbals have the same 'artist' model specification used with ATV's aDrums. These pro-grade cymbals have a 360-degree triggering response, including choke, and their thin profile ensures a natural feeling of flex and swing when played. The EXS-3CY's high quality 10" snare and tom pads are fitted with mesh heads and have a multi-sensor design that eliminates hotspots to give a consistent dynamic response.

Today, ATV Corporation is excited and proud to introduce the EXS-3CY to the worldwide community of edrummers!

For more information about the EXS-3CY, please contact your ATV dealer or email info@atvcorporation.com
