* Skip: Frames are skipped at certain intervals to achieve a constant frame rate.
* Repeat: Frames are repeated at certain intervals to achieve a constant frame rate.
* Merge: Simple I/P conversion is performed by field merging.
∗ For frame rate conversion, ancillary information of an input will be directly output and may not be processed by an output device.

* No resolution conversion function is available.

  Images are located in the output screen at their respective input resolutions with their upper

  left corner aligned with the upper left corner of the screen.

  The output position can be adjusted with AV-USB-RS.
* Crop: The input screen is partially cropped.
* Box: The blank output area is filled in black.
